

Şindrilaru, Andreea A.D.

Checkpoint 15 Tim 14-01-2022

Şindrilaru, Andreea A.D. in a few seconds

1. I have showed Tim the last version of the application and the documentation. During the winter holiday I have implemented the functionality to upload pictures for movies and filter them by genre, while updating all the tests related to the movie class to make sure they pass. Also, according to Sprint 5 feedback, I have updated the following documents (Design Document, OWASP Report and Research Document).
2. Tim is happy with my progress and advised me to prepare for the next week assessment.
3. I will finish the remaining tasks from Sprint 6 deliverables.

Checkpoint 14 Frenk 16-12-2021

Şindrilaru, Andreea A.D. a month ago

1. I have showed Frenk the current status of my project and discussed about could be improved. Comparing to the last feedback session received from Frenk. I have managed to implement the possibility to choose multiple projections when adding a movie. Also, I have showed Frenk the OWASP report.
2. So far, Frenk is happy with my project and with the current documentation I provide.
3. I still have to implement the option to upload images to movies, finish the end-to-end testing and maybe add pagination.

Checkpoint 13 Tim 10-12-2021**Şindrilaru, Andreea A.D.** a month ago

1. Today I showed Tim the current status of the project and discussed what should be further more added. For a movie I should be able to add a picture for it. (For now I only use a local one)
2. The feedback was positive, Tim was happy with my progress.
3. I will start writing the OWAS Report, implement the add picture feature, try finishing the end-to-end testing and polish some pages for the frontend.

Checkpoint 12 Frenk 30-11-2021**Şindrilaru, Andreea A.D.** a month ago

1. Frenk had an overview over my project.
2. I would like to add the possibility of adding movie projections to a movie. Frenk gave me some feedback on how should I approach that since, in theory, the admin should also add projection dates and times for a movie so that the user knows when the movie is played.
We have also discussed about the flow of when a user is buying a ticket.
3. I will take the feedback into account and will try to implement it.

Checkpoint 11 Tim 19-11-2021**Şindrilaru, Andreea A.D.** 2 months ago

1. Tim had a look over my project.
2. I showed Tim 2 problems (with Sonarqube and complaint DTO getting sender_id null) which I have encountered so that he could help me solve them as I have tried fixing them alone, but without success. In the end, we managed to fix them.

Checkpoint 10 04-11-2021**Şindrilaru, Andreea A.D.** 2 months ago

1. I have asked Frenk to give feedback on my DTO's classes, on my front-end and my documentation.
2. He was satisfied with work, suggested me to redo the createTicket method from my TicketController to avoid the ticket/null problem.
About the research document, I have rethink the main question as my tutorial is going more to a tutorial than a research paper.
3. I will take the given feedback into account and try to implement it in the given time.

Checkpoint 9 Tim 01-11-2021**Şindrilaru, Andreea A.D.** 2 months ago

1. I showed Tim my current progress. We have discussed feedback from the last sprint.
2. Tim was satisfied with my current progress, my research document is fine so far, and in my back-end I need to fix my TicketDTO class, because when I post a new ticket, the ticket url is : ticket/null, but when it is added to the database, the id is autoincremented.
3. I will implement the given feedback, finish my research document and try to add a postMovie component to my front-end, because for the others i will need to implement JWT.

Checkpoint 8 07-10-2021**Şindrilaru, Andreea A.D.** 3 months ago

1. I showed Frenk my Design Document, C4 Diagram and the ViewModel Tim asked me to do.
2. Relating the Design Document, minor adjustments should be made. The diagram is ok so far. For the front-end Frenk suggested me to try using bootstrap.
3. I will do some more research for the design document to make sure I cover everything and will implement the feedback Frenk gave me.

Checkpoint 7 Tim 01-10-2021**Şindrilaru, Andreea A.D.** 3 months ago

1. I showed Tim my front-end implementation for the News, Complaints, and Movies classes and also fixed the problem with Ticket object.
2. I should start making the DTO's and Viewmodels.
3. I will implement the given feedback into my app.

Checkpoint 6 Tim 24-09-2021**Şindrilaru, Andreea A.D.** 4 months ago

1. I asked Tim a few questions regarding my TicketService class (when the object Ticket is created, Postman shows the full object of the holder and I wanted to know if there is any way for it to only show the name of the holder. Same thing applies for the movie).
2. The feedback was that I need to have a View Model to avoid this.
3. I will do some research online on what and how the view model should look.

Checkpoint 5 Tim 17-09-2021**Şindrilaru, Andreea A.D.** 4 months ago

1. Tim had a look on what I have done so far.
2. Complaint class being show twice (even though when I debug it it shows list has 1 element), unit tests are ok, but try testing service classes.
3. I will try to fix the complaint class and will do unit tests for service classes.

Checkpoint 4 14-09-2021**Şindrilaru, Andreea A.D.** 4 months ago

1. Feedback on mockup design for the app, testplan and java app.
2. Finish mockup, implement the missing entities according to the mockup and update testplan.
3. I will finish my mockup first then update documentation accordingly.

Checkpoint 3 Tim 10-09-2021**Şindrilaru, Andreea A.D.** 4 months ago

1. Gave feedback on startup of the project, project plan and project backlog.
2. For the project plan, I need to extend it so that I can answer the question "what problem does the client have? " For project backlog I should either add acceptance criteria under each user story or add a link for user stories which redirects to the respective acceptance criteria. For the app, I should start organizing (adding logic layer, interfaces etc.)
3. I will start updating the documentation and start designing the app structure keeping in mind SOLID principles.

Checkpoint 2 Tim 06-09-2021**Şindrilaru, Andreea A.D.** 4 months ago

1. We discussed about the product backlog.
2. Be more explicit on the acceptance criteria, redo the priority row(use numbers not MoScow, due to the fact that we don't know with which feature should we start with.)
3. I will take the given feedback into account and update my backlog document.

Checkpoint 1 Tim 03-09-2021 No feedback submitted.**Kurvers, Tim T.L.H.** (Teacher) 4 months ago

1. What did you discuss with the teacher?
2. What was the feedback?
3. What will you do now?
